Identification of Facilities
Point Pleasant, WV

The proposed translator will broadcast on 213, which is within the 60 dBμ contour of third adjacent station WVWV on channel 210. The WVWV interfering contour at the translator site is 69.3 dBμ F(50,50). Using the ratio of 100:1 (translator to WVWV) on the third adjacent channel, the population within the proposed translator 109.3 dBμ contour is zero. Applying the antenna manufacturer's vertical radiation pattern the area of interference is able to be more accurately calculated geometrically than just by using the free space equation alone. This particular antenna is a one bay Nicom BKG77. It was determined from the manufacturer's vertical plan that from 30 degrees below horizontal to 50 degrees below horizontal the interference area would reach the ground and extend 61.5 meters horizontally. We have proposed the antenna radiation center will be 35 meters above ground with an Effective Radiated Power of 13 watts. There are no occupied structures or elevated roadways within the interference area of the translator.

Therefore, the application is in compliance with the following: §74.1204 (d) "The provisions of this section concerning prohibited overlap will not apply where the area of such overlap lies entirely over water. In addition, an application otherwise precluded by this section will be accepted if it can be demonstrated that no actual interference will occur due to intervening terrain, lack of population or such other factors as may be applicable."
